

The GeoBook is an interactive map format, which allow users not only to pan, zoom and measure items on the map, but to view the information behind each map locations in data tables that can associated and analyzed. Also available are images, word documents, spreadsheets and Internet accessible updates as provided by the CD author. The GeoBook will display any files for which the users computer has the supporting software.

GeoBook Author is the software to create a GeoBook. See <http://www.sanborn.com> for more details about the authoring product.

Be sure to check out the [Black Rock eBOOK](#) featured in the Projects section.
