

WindImage is an option for those using a GPS camera & ArcGIS

The software generates watermarked copies of the photos displaying the coordinates of the location the photo was taken, ArcGIS shapefiles or a geodatabase feature classes for display of photo locations and hyperlinks to the images. Photos can also be stored in the database directly, or file names captured in a feature class with links to images saved outside the geodatabase.

See <http://www.windenvironmental.com> for product details.

See www.elecddata.com/gps/Photo_Linking_Software_Comparison.pdf for a comparison of GPS-Photo Link and WindImage software options.
